

**A PEAR THAT GIVES SOME PROMISE OF RESISTANCE TO BLIGHT.  
(PYRUS CALLERYANA. SEE S. P. I. NO. 45687.)**

While no pear has as yet been found thoroughly resistant to pear blight, strains of this remarkable Chinese species are showing great promise. This fact, coupled with the unusual adaptability to habitat already shown, makes this pear of great interest to growers. (Photographed by F. N. Meyer at Koomooshu, Hupeh, China, April 4, 1917; P13269FS.)
